PROFESSIONAL SUMMARY

Fullstack Software Engineer with nearly 2 years of hands-on experience building and supporting production-used internal systems using PHP (Laravel), React, and TypeScript. Experienced working with monolithic Laravel applications, RESTful APIs, relational databases, and real-time data flows. Strong practical exposure to iterative development, system evolution, and solving real-world technical problems in live environments. Motivated to grow into distributed systems and event-driven architectures.

AREAS OF EXPERTISE

Full-Stack Development | PHP (Laravel) | React.js | TypeScript | RESTful API Design | Monolithic Application Development | OOP Principles | Real-Time Systems | Relational Databases | Agile / Iterative Development | Problem Solving | DevOps exposure: Git, Docker, Linux. | Eager to learn DevOps practices, CI/CD workflows, and automated deployment tools

WORK EXPERIENCE

LGU – City of Bayawan, HR Department, May 2024 – Present

IT Services Specialist / Fullstack Software Engineer

Worked as an all-around engineer supporting internal systems while contributing to backend and frontend development.

- **Designed, developed, and maintained** internal web applications used by HR and other departments.
- Built backend functionality using PHP (Laravel) following **OOP principles** and **MVC architecture**.
- **Developed frontend interfaces** using **React** and **TypeScript** for internal dashboards and user-facing tools.
- **Implemented RESTful APIs** using JSON and handled **authentication** and **role-based access control**.
- Worked with **MySQL databases**, including **schema updates**, **query optimization**, and **data integrity handling**.
- Supported and maintained a **Laravel-based monolithic system** used in **live operational environments**.
- **Delivered features incrementally** and adjusted functionality based on evolving user and business requirements.
- Participated in **on-site testing**, **live deployments**, and **real-time troubleshooting** during time-critical events.
- **Collaborated** closely with non-technical stakeholders to scope requirements and translate them into working solutions.

PROJECTS (<https://github.com/kimpoy31>)

Real-Time Event Tabulation System - https://github.com/kimpoy31/hr_tabulator_v2

Built a real-time scoring system for live judged events supporting multiple judges and contestants simultaneously. Implemented point-based and rank-based scoring, real-time updates using WebSockets, and automatic result generation for on-the-spot printing.

Department-Based ID Maker System - https://github.com/Team-HR/id_maker

Developed a role-based ID generation system that decentralized ID processing across departments while enforcing access controls and consistent formats.

Attendance Monitoring System - https://github.com/Team-HR/attendance_monitoring

Delivered a rapid-build attendance system for HR events supporting QR scanning, barcode scanning, manual lookup, and printable daily time records.

EDUCATION

Bachelor of Science in Information Technology

Negros Oriental State University – Bayawan – Santa Catalina Campus
